Medical virology books pdf

Fenner and White's Medical Virology, The Fifth Edition, offers an integrated view of related sciences, from cell biology, medical epidemicology and human social behavior. The perspective provided by this book, that medical virology such as infectious disease research, is designed to provide a starting point, anchor, for those who must be involved in the subject of clinical practice, public health practice, research, and other aspirations. The book presents a detailed overview of the characteristics of viruses, the way viruses are reproduced and how viruses cause disease. These chapters are then followed by an overview of the principles of diagnosis, epidemiology, and how viral infections can be controlled. The first part concludes the debate on the emergence of the debate and seeks to predict the following major public health problems. They form a guide to help you delve into specific diseases of interest to the reader, as described in Part II. This clear and short but comprehensive text is admirably suited not only to advanced science and medicine students, but also to the needs of graduate students, teachers and researchers in all fields of virology. Features updated and expanded coverage of pathogenesis and immunity Includes the latest laboratory diagnostic methods Provides an overview of the clinical signs of human viral disease, vaccines, chemotherapy, epidemiology, and control of Advanced Bachelor's degrees, postgraduate, lecturers and researchers in virology, medicine, infectious diseases, microbiology, immunology and pathology. Also, health officials foreword foreword in Part I: Principles of Virology Chapter 1. History and Effects of Virology Abstract Why Study Virology? A brief history of virology of virospheric nature viruses scope this book further reading Chapter 2. Classification of viruses and phylogenetic links Abstract viral taxonomy Viruses in the viral nomenclature of viruses on the basis of epidemiological criteria Taxonomy and causal relationship between viral and disease genome sequencing and further reading of viral evolution 3. Virion structure and composition Abstract physical methods for studying the structure of the virus Virions Virion symmetry further reading 4. Virus Replication Abstract Growth of Virus Replication Cycle Satellite Viruses and Viroids Generation Genetic Diversity Quantitative Virus Tests Defective Interfering Viruses Re-Reading Chapter 5. Innate immunity To Abstract Innate Responses Monocytes, Macrophages, and Dendritic Cells in the Role of Natural Killer (NK) Cells and the Link Between Adaptive Immunity Importance of Molecular Recognition of Interferons cell Death and Apoptosis Evasion Strategies for Further Reading chapter 6. Adaptive immune responses to infection Abstract overview of adaptive immune responses to viral infection Large Histocompatibility Complex (MHC) and antigen presentation system Antibodies Cytokines Recovery from viral infection immunity of antibodies against viral infectivity to reinfective Immunological memory Further reading 7. Statogenesis of disease-induced infection Abstract Inoculums of inoculums of the virus – the main factor regulating the specific mechanisms of infection in the body Against persistent viral infection infection – mechanisms that affect the persistence of disease production viruses and viral virulence of immunosuppression and the disifying resistance of the host to co-infections further reading 8. Patterns of infection Abstract transient localized infections transient systemic infections persistent infections persistent localized infections persistent systemic infections further read chapter 9. Mechanisms Of Viral Oncogenesis Abstract Concepts and Overview of Virus Transformation Oncogenes and Tumor Suppressor Genes Oncogenesis by Retroviruses Oncogenesis by Small DNA Viruses Oncogenesis by Large DNA Viruses Other Important Viruses Related to Cancer Prevention and Management of ViralLy Induced Tumors Further Reading Chapter 10. Laboratory diagnosis of viral diseases abstract justification performing laboratory Virus Diagnosis collection, packaging, and transport samples for direct identification of virus, virus antigen, or viral genome virus isolation measurement of serum antibodies interpretation laboratory results laboratory results laboratory drive for every 11. Vaccines and vaccination Abstract vaccine design and production Vaccine safety, efficacy and practical usage factors that affect vaccine safety passive protection vaccination policy and programs for further reading chapter 12. Antiviral chemotherapy abstract strategies for the development of antivirals Clinical application Clinical strategies mechanisms the action and role of individual antiviral drugs in the development of later reading chapter 13. Epidemiology of viral infections Abstract mechanisms Viral survival Viral spread and transmission factor routes that affect the dynamics of viral infections Epidemiological studies Mathematical modelling further reading chapter 14. Antiviral disease control, prevention and eradication abstract monitoring and modelling measures to minimise transmission of immunisation eradication Bioterrorism Further reading Chapter 15. Emerging Virus Diseases Abstract Recognition and Changes in Disease Patterns Factors That Affect The Emergence of Climate Change Easy To Travel Animals Source of Human Disease Prevention and Control Further Reading Part II: Specific Viral Diseases in Humans Chapter 16. Smallpox Abstract Properties PoxvirusEs Diseases Caused by Members of the Family Orthopoxvirus Diseases Caused By Members of the Family Molluscpoxivirus Diseases Caused By Members of the Family YatapoxVirus Diseases Caused By Members of the Family ParapoxVirus Further Reading Chapter 17. Herpes viruses characteristics of viruses Herpes Simplex Virus Infection Viral infection Cytomegalovirus infection Human herpes viruses 6 and 7 (HHV-6 and HHV-7) Infection Epstein-Barr Virus infection Human herpes virus 8 (HHV-8: Kaposi sarcoma related herpes virus) Infection B Virus (Macacine Herpesvirus 1) Infection Further read Chapter 18. Adenoviruses Abstract classification characteristics Adenovirus virus replication Adenovirus Diseases Pathogenesis, Pathology and immunity laboratory diagnoses epidemiology, prevention, control, treatment of adenoviruses as vectors heterologous DNA further reading chapter 19. Papillomaviruses Abstract Classification Features Papillomaviruses Viral Replication Clinical Signs of Pathogenesis and Immunity Natural Bands Genital HPV Infection Laboratory Diagnosis Epidemiology Treatment and Prevention Further Reading Chapter 20. PolyomavirusEs Abstract Classification, Characteristics and Replication Pathogenesis BK Polyomavirus JC Polyomavirus Other Recently Described Human Polyomavirus Further Reading Chapter 21. Parvoviruses Parvoviridae virus replication parvovirus B19 pathogenesis and immunity Clinical signs Transient Aplastic crisis Other complications Parvovirus B19 Infection Laboratory Diagnosis Epidemiology treatment and control of Dependoviruses Human Bocaviruses Further reading chapter 22. Hepatitis B and Hepatitis Delta Viruses Abstract Hepatitis B Virus Hepatitis Delta Virus Classification Virion Features Viral Replication Clinical Features Pathogenesis Laboratory Diagnosis Of Epidemiology Treatment and Prevention further Reading Chapter 23. RetrovirusEs Reretroviridae virus replication abstract properties Human T-cell lymphotropic virus Human immunodeficiency viruses Subfamily Spumavirinae Further reading Chapter 24. Reoviruses Abstract properties of reoviruses Viral replication Rotavirus Gastroenteritis Orbit viruses Collocvirus orthoreoviruses Further reading chapter 25. Orthomyoviruses Abstract properties of orthomyoviruses Influenza Further reading Chapter 26. Paramyxoviruses Abstract properties Paramyxovirus respiratory synchronous synchronous viral infection Parainfluenza virus infections Human methanemovirus Infection Measles mumps henipavirus Infections Further reading Chapter 27. Rhabdoviruses The abstract properties of rhabdoviruses Rabies Vesicular stomatitis and other rhabdoviruses Further reading chapter 28. Filoviruses Abstract properties Bunyaviruses Ebola and Marburg virus disease (Ebola and Marburg Hemorrhagic fever) Further reading chapter 29. Bunyaviruses Abstract Features BunyavirusEs Diseases caused by members of the Family orthobunyavirus Diseases caused by members of the family Flebovirus diseases caused by members of the Family Of Nairovirus Diseases caused by members of the genus Hantavirus Further reading chapter 30. ArenavirusEs Abstract Properties Arenavirus Lymphocytic Choriomeningitis Viral Infection Lassa Fever Viral Infection South American Hemorrhagic Fever Fever Reading Chapter 31. CoronavirusEs Abstract Properties Of Coronavirus Viruses Severe Acute Respiratory Virus (SARS-CoV) Middle East Respiratory Virus (MERS-CoV) Further Reading Chapter 32. Picornaviruses Abstract characteristics picornaviruses Poliomyelitis Enteroviruses A, B, C, D and Parechoviruses Human rhinoviruses A, B and C A (HAV) Further reading Chapter 33. Caliciviruses Abstract Classification Virion Features Calicivirus (Norovirus and Sapovirus) Gastroenteritis Further Reading Chapter 34. Astroviruses Abstract Properties Astroviruses Clinical Properties Laboratory Apidemiology Prevention Further Reading Chapter 35. Togaviruses Abstract properties Of togavirus diseases caused by members of the genus alphavirus Alpha viruses cause encephalitis-Eastern, Western, and Venezuelan encephalitis Alphavirus Infections Marked fever, rash, myalgia, arthralgia, and arthritis Chikungunya Other virus infections Disease caused by Rubivirus Rubella virus further reading chapter 36. Flaviviruses Abstract Features FlavivirusEs Diseases Caused By Mosquito-Borne Member Viruses Family Flavivirus Yellow Fever Zika Virus Japanese Encephalitis West Nile Virus Infection St. Louis Encephalitis Faithless Virus Infection Murray Valley (Australia) Encephalitis Rocio Virus Encephalitis Diseases Caused by Tick-Flavivirus Diseases Caused By Members Of Genus Hepacivirus Other HepacivirusEs Additional Reading 37. Hepeviruses Abstract Classification and Characteristics of Hepatitis E Virus Viral Replication Clinical Characteristics Pathology, Pathogenesis, and Immunity Laboratory Diagnostics Epidemiology, Prevention, Control, and Therapies for Further Reading Chapter 38. Prions Abstract Features Prions Human Prion Diseases Diagnosis Treatment and Prevention of Other Chronic Neurodegenerative Diseases Further Reading Chapter 39. Viral Syndromes Abstract Human Virome Viral Diseases Respiratory Viral Gastroenteritis Viral Diseases Central Nervous System Viral Skin Rash Viral Haemorrhagic Fever Viral Genitourinary Infections Viral Diseases Eye Viral Arthritis Viral Cardiotology Viral Hepatitis Viral Pancreatitis and Diabetes Chronic Fatigue Syndrome Congenital and Perinatal Viral Infections Viral Infections Immune Deficiency Patients Diseases Unknown Etiology Further Reading Index No. number of pages: 604 Language: English Copyright: © Academic Press 2017 Published: 30.11.2016 Imprint: Academic Press Hardcover ISBN: 9780123751560 eBook ISBN: 9780123751577 AO, BSc(Med), MBBS, PhD, FRCPath, FRC. Emeritus Professor of Virology, University of Adelaide, and former head of the Infectious Diseases Laboratory Institute, Institute of Medical and Veterinary Science, Adelaide, South Australia, Australia. His research knowledge lies in hepatitis viruses, especially hepatitis B; HIV and AIDS; influenza; diagnosis of the virus and pathogenesis; immunisation and viral infections. He has taught for more than forty years in medical bachelor and graduate and phD students, and worked with government research funding and public health institutions. School of Molecular and Biomedical Science, University of Adelaide, Adelaide, South Australia, Australia Colin R Howard, DSc, PhD, FRCPath, FRSB holds professors' places at London and Birmingham universities. With more than 40 years of experience in teaching science and virology, he has taught seminars for undergraduates, veterinarians and postgraduate staff in Europe, Asia, Africa and the Americas. His research interests have focused on persistent viral infections and haemorrhagic fever. With his interest in vaccines, he has advised the World Health Organisation, government agencies and vaccine manufacturers. University of Birmingham, UK Frederick A. Murphy, DVM, PhD, is professor, Department of Pathology, Texas Department of Medicine (UTMB), Department of Pathology at Galveston University. He holds Bs and DVM from Cornell University and a PhD from the University of California, Davis (UC Davis). Previously, he was dean and distinguished professor, Veterinary Medicine School, and distinguished professor, School of Medicine, UC Davis. Before that, he was director of the National Center for Infectious Diseases and director of the Department of Viral and Rickettsial Diseases, centers for Disease Control, Atlanta. He is a member of the Medical Institute of the Us National Academy of Sciences and a member of the German Academy of Sciences and the Royal Belgian Academy of Medicine. He is a doctor of medicine and surgery at the University of Turku in Finland; Doctor of Science at guelph University, Canada; Honorary Doctor of Veterinary Medicine, University of London, United Kingdom; Doctor of Science, Dublin University, Ireland; U.S. Government Presidential Award; PennVet World Leadership Award from the University of Pennsylvania and outstanding microbiologist from the American College of Veterinary Microbiologists. At UTMB, he is a member of the Institute for Human Infections and Immunity, the Center for Biodefense and Emerging Infectious Diseases, the Galveston National Laboratory and the McLaughlin Endowment for Infection and Immunity. Its professional interests include the pathology and epidemiology of highly pathogenic viruses/viral diseases: rabies and rabies-like viruses, arboviruses, haemorrhagic fever viruses and other neurotropic viruses. He has been a leader in the promotion of concepts of new and new infectious diseases and the threat posed by new and emerging zoonoses and bioterrorism. Recently, he has been working on Internet resources in the history of virology: The bases of virology . University of Texas Medical Branch, Galveston, TX, USA Thanks for posting out! We appreciate your contribution. your review so that everyone else can enjoy it too. Thanks for posting out! Your review was successfully sent and we now expect our team to publish it.
